This workshop is financed by the the FORMAS Project Evidence-based navigation of SDG synergies and conflicts: Renewing Environmental Monitoring and Assessment for a more effective role in Agenda 2030.

This workshop will explore the potential of Environmental Monitoring and Assessment (EMA) to navigate the nexus of Sustainable Development Goals (SDG) issues surrounding forests as a source of intensified biomass production in future bioeconomies.

The synergies and conflicts at the intersection of SDGs with respect to climate, water, energy and biodiversity will be used to explore how EMA can more fully support Agenda 2030. Work on this during the past year in three regional settings – Sweden, Ethiopia and Chile – will be reported at the workshop. Specific questions are how EMA currently supports governance, and the possibilities for developing EMA to contribute more to governance by working with all three dimensions of the sustainable development goals: environment, economy and society.

The workshop will be broadcasted on the Internet, please find link on [www.ksla.se](http://www.ksla.se)

Welcome!
